

ALL-IN-ONE PACKAGE FOR DIGITAL ASSET MANAGEMENT

We handle the complexity – you gain full transparency.

As **your digitalization partner**, we take care of the **complete structuring and digitization** of your railway infrastructure assets – with **minimal effort on your side**. We create a **consistent, high-quality data foundation** that enables precise **lifecycle tracking** and ensures **maximum transparency**. **We cover everything:** from data management and system implementation to system integration, operations, ongoing controlling and audit support.

The **analysis of your existing data** and current status forms the basis for a structured and successful implementation of the **asset management software**. After implementation, the system – continuously maintained and updated – serves as a **consistent, audit-ready foundation for informed, data-driven decisions**.

ALL SERVICES FOR YOUR PROJECT SUCCESS FROM ONE PARTNER

What we deliver

- » Deep domain expertise in infrastructure and software
- » Data analysis & availability checks
- » Structured system landscape setup
- » Seamless integration & stable operations
- » Standardized implementation approach
- » Efficient data migration
- » Setup of an asset database
- » Ongoing master data management
- » Efficient data capture of voestalpine Railway Systems products, including Digital Touchpoint
- » Continuous data controlling

During system implementation, we support you in harmonizing your asset data, building a consistent data foundation and defining all relevant processes and interfaces. This creates a **future-proof digital infrastructure** that increases transparency and reduces risk.

If required, we continue to take responsibility beyond implementation: keeping your data up to date across the entire asset lifecycle — through continuous data controlling, quality checks, and monitoring of system data population as a reliable basis for audits.
