<sup>\*</sup> The upper limiting dimension is given by the limiting deviation of the mass.

Excellent fatigue strength of endurance® dynamic hollow sections due to narrowest chamfer dimensions ≤1,8xT. Restricted tolerances compared to the hollow section standard EN 10219 enable repeatable automated processability.

## **AVAILABLE DIMENSIONS FOR SQUARE HOLLOW SECTIONS**

In the table below you can find all technically producable rectangular tubes up to a yield strength of 460MPa according to the endurance smart factory standard. The difference in color indicates the surface finish.

The symbols indicate the possible forming technologies.

For special dimensions, please contact your contact person in our sales team.
